Evidence emerges that a placebo or less toxic COVID vaccine may have been used in some states or for some politicians

“The standout finding was that the single best-performing site in the entire country – the one with the lowest (and even favourable) mortality statistics – was located in Wellington Central, right in the seat of government.” Pharma and Govmt insiders whispered to get saline

Barry Young: The Safest Vaccine Site in New Zealand Was Right Next to Parliament @BarryYoungNZ explains the detailed statistical analysis he performed on the New Zealand vaccination data. Using the same tools an epidemiologist would employ – graphs, confidence intervals, Poisson

Here is the blown-up chart, which reveals that in states with the highest rates of COVID vaccination, the rate of adverse events reported to VAERS was significantly lower than expected, compared to other states. These states included all of New England, the District of Columbia, Maryland, Virginia, New York, New Jersey and Washington state. All happen to be blue except purple NH.

In New Zealand, epidemiologist Barry White, working for the public health department, blew the whistle on large numbers of deaths occurring immediately after COVID vaccinations. He has been hounded and charged with crimes ever since, and remains in legal jeopardy, with a trial coming up.

What he discovered is that the lowest rate of adverse events reported to the health system in New Zealand occurred right where Parliament was located in New Zealand.

Both these datasets suggest that politicians may have received safer vaccine batches than your average Joe.
